

Energy Management

It is the policy of the Board of Education to use energy as conservatively as possible. The superintendent is charged with the responsibility to:

- a. Maximize energy conservation while maintaining a healthy and comfortable learning environment for students and staff;
- b. Maintain and operate all facilities and equipment for the optimum utilization of energy;
- c. Develop facilities and equipment upgrading programs for the conservation of energy, subject to the availability of funds;
- d. Provide in-service training for staff and students on energy conservation rationale and techniques, subject to the availability of funds;
- e. Encourage closing off underutilized classrooms and/or wings of schools with declining enrollment to conserve energy costs;
- f. Design new schools and additions for optimum energy conservation, subject to limitations of school program and construction costs.
